Education

BE : Vishwakarma Government Engineering College 2022 – 2026
Computer Science & Engineering (Data Science)
• CGPA : 9.21
HSC : Swastik Education Campus(GSEB Board) 2022
• Percentage : 88.67% , Percentile : 96.83

Experience

AI Engineer Intern — iQudTek 📅 May 2026 – Present
• Designed and developed an end-to-end cloud-native Computer Vision pipeline for smoke study analysis, powering the company's product and client solutions.
• Architected and deployed the complete workflow on AWS using Lambda, SageMaker, S3, CloudWatch, and other managed services.
• Independently owned the complete development lifecycle, from model training and pipeline design to cloud deployment and production integration.
AI/ML Engineer Intern — Bacancy Technology 📅 Jan 2026 – May 2026
• Worked on end-to-end AI application development spanning ML, DL, NLP, GenAI, and Agentic AI.
• Designed workflow automations with n8n to streamline business processes and API integrations.
• Built scalable backend services using FastAPI and integrated them with React applications.

Projects

RoastForge — MCP-Enabled Agentic AI Resume Roaster & Rebuilder [🌐 Agentic AI - RoastForge](#)
• Built a 8-node LangGraph + FastMCP agentic workflow that parses resumes, brutally roasts weaknesses, evaluates ATS fit (0–100), iteratively rebuilds until score > 90, generates interview questions, and exports professional PDF resumes autonomously
• Integrated Claude Desktop MCP with parallel node execution (Roast + ATS), conditional routing loops, MCP Resources for real PDF delivery, and structured Pydantic outputs; Increased average ATS score from 55 to 84 (+53%) through iterative multi-agent refinement.
RAG-based YouTube Q&A System [🌐 YouTube QA Assistant](#)
• Built a RAG pipeline using LangChain, FAISS, and Gemini to answer questions from video transcripts.
• Applied chunking and embeddings for efficient retrieval and context-aware responses.
• Developed a Streamlit interface for real-time querying.
Real-Time Squid Game (Red Light Green Light) [🌐 Squid Game](#) [in Video](#)
• Built a real-time computer vision game using OpenCV and MediaPipe to detect player movement and enforce "Red Light, Green Light" rules.
• Implemented pose detection and motion tracking to identify user movements and trigger game logic dynamically.
• Optimized frame processing for smooth real-time performance.

Technical Skills

Languages: Python, SQL
Cloud & MLOps : AWS (SageMaker, Lambda, S3, CloudWatch, IAM, EC2)
GenAI & LLMs: LangChain, LangGraph, RAG, FAISS, Prompt Engineering, MCP
AI/ML: Scikit-learn, TensorFlow/Keras, OpenCV, NLP, Computer Vision
Data & Visualization: Pandas, NumPy, Matplotlib, Power BI
Tools & Frameworks: n8n, FastAPI, React, Git/GitHub, Jupyter, Google Colab
